Technical Skill

Languages & Databases: Python, Pandas, NumPy, SQL, PostgreSQL

Visualization Tools: Power BI, Matplotlib, Seaborn

Other Skills: Advanced Excel, Business Analysis, Data Analysis

Projects

Netflix Movie Data Analysis | Jupyter Notebook , Data cleaning , Python, Matplotlib , Seaborn , numpy, pandas

- · Use Pandas, Numpy and visualization libraries to analyze Netflix content.
- Analyze genres having the highest votes and movies which got the highest Popularity as well as lowest popularity.
- Found that "Spider-Man: No Way Home" alone accounted for over 80% of popularity votes within its genre group
- Observed that the **year 2020 had the largest volume of movie releases** in the dataset, indicating a significant production peak.

Zomato Data Analysis | Jupyter Notebook, Data cleaning, Python, Matplotlib

- · Analyzed a Zomato restaurant dataset to uncover insights into customer behavior and spending patterns.
- Focused on restaurant ratings votes and customer preferences to identify popular dining choices.
- Found that over **50**% of customers gave the highest number of votes to dining restaurants, indicating strong preference for dine-in experiences.
- Identified that couples typically spend around ₹300 per order, suggesting opportunities for targeted promotional
 offers.

Interactive Power BI Dasboard – Mobile Sales Analysis | Power BI, Data modeling and cleaning

- Developed a Power BI dashboard to analyze ₹68M in mobile sales from 325 transactions, revealing that Mumbai alone contributed over 32% of total sales, while Vivo S1 emerged as the highest-selling model with ₹8M in revenue.
- Identified that Tuesday generated peak sales (~₹11.6M) while Thursday had the lowest (~₹8.2M), and found Cash and Debit Card accounted for the most used payment methods (52% combined).

Online Book Store | PostgreSQL, Sql, excel

 Built and queried a SQL database for and Online Book Store and extracted meaningful insights about customer preferences and sales trends using advanced SQL queries.

Excel Dashboard for McDonald's Sales Trends & Analysis

- Analyzed **\$2,544** in total sales with \$890 profit across 87 customers, highlighting strong profitability with over 85% order success, 89% profit efficiency, and 87% customer acquisition rate.
- Identified key satisfaction drivers where Availability (95%), Hygiene (93%), and Quality (86%) received the highest ratings, while Service (53%) and Speed (54%) showed improvement opportunities.

Awards & Certificates

BCG GenAl Job Simulation - Forage | May 2025

- Completed BCG's GenAl job simulation on Forage, developing an Al-powered financial chatbot using Python and Pandas for data manipulation.
- Interpreted **10-K and 10-Q financial reports** to generate user-friendly insights, applying rule-based logic for chatbot response automation.
